## **Veterinary Report**

### **2019 Simple Verse (Frankel/Simple Verse) 9 mths Bay Thoroughbred Colt**

Radiographs taken on the 12<sup>th</sup> November have been examined and the changes present graded low to medium risk. These include fragmentation to the proximal aspect of the sagittal ridge on the LF fetlock.

On endoscopic examination the larynx was graded 2A, with occasional asynchronous movement but full abduction easily achieved and maintained.

**J Campbell, BVMS, MRCVS**
